1 Affected Products

All variants of the following CODESYS V3 products in all versions prior V3.5.14.0 containing communication servers for the CODESYS communication protocol are affected, regardless of the CPU type or operating system:

- CODESYS Control for BeagleBone
- CODESYS Control for emPC-A/iMX6
- CODESYS Control for IOT2000
- CODESYS Control for Linux
- CODESYS Control for PFC100
- CODESYS Control for PFC200
- CODESYS Control for Raspberry Pi
- CODESYS Control RTE V3
- CODESYS Control RTE V3 (for Beckhoff CX)
- CODESYS Control Win V3 (also part of the CODESYS Development System setup)
- CODESYS Control V3 Runtime System Toolkit
- CODESYS V3 Safety SIL2
- CODESYS Gateway V3
- CODESYS HMI V3
- CODESYS V3 Simulation Runtime (part of the CODESYS Development System)

2 Vulnerability overview

2.1 Type

Use of Insufficiently Random Values

2.2 Management Summary

CODESYS communication servers use insufficiently random values.

2.3 References

CODESYS JIRA: CDS-62811

2.4 Severity Rating

3S-Smart Software Solutions GmbH has rated this vulnerability as critical.

The CVSS v3.0 base score of 9.4 has been assigned. The CVSS vector string is (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:H/A:L). [7]

3 Vulnerability details

3.1 Detailed Description

CODESYS products like CODESYS Control runtime systems provide communication servers to enable communication with clients like the CODESYS Development System. The (random) numbers used by this servers for communication sessions and similar identifiers are insufficient.

3.2 Exploitability

This vulnerability could be exploited remotely.

3.3 Difficulty

An attacker with low skills would be able to exploit this vulnerability.
3.4 Existence of exploit
No known public exploits specifically target this vulnerability.

4 Available software updates
3S-Smart Software Solutions GmbH has released version V3.5.14.0 to solve the noted vulnerability issue for all affected CODESYS products.
Please visit the CODESYS update area for more information on how to obtain the software update [3].

5 Mitigation
Currently, 3S-Smart Software Solutions GmbH has not identified any workarounds for this vulnerability.
In general, 3S-Smart Software Solutions GmbH recommends as part of the mitigation strategy the following defensive measures to reduce the risk of exploitation of this vulnerability:
• Use controllers and devices only in a protected environment to minimize network exposure and ensure that they are not accessible from outside
• Use firewalls to protect and separate the control system network from other networks
• Use VPN (Virtual Private Networks) tunnels if remote access is required
• Activate and apply user management and password features
• Limit the access to both development and control system by physical means, operating system features, etc.
• Protect both development and control system by using up to date virus detecting solutions
For more information and general recommendations for protecting machines and plants, see also the CODESYS Security Whitepaper [1].

6 Acknowledgments
3S-Smart Software Solutions GmbH thanks those in the security community, who help us to improve our products and to protect customers and users through coordinated vulnerability disclosure.
We thank Alexander Nochvay from Kaspersky Lab ICS CERT for reporting this vulnerability following coordinated disclosure.

7 Further Information
For additional information regarding the CODESYS products, especially the above-mentioned versions, or about the described vulnerability please contact the 3S-Smart Software Solutions support team [5].

8 Disclaimer
3S-Smart Software Solutions GmbH assumes no liability whatsoever for indirect, collateral, accidental or consequential losses that occur by the distribution and/or use of this document or any losses in connection with the distribution and/or use of this document. All information published in this document is provided on good faith by 3S-Smart Software Solutions GmbH.
